To Backup Created Packages and Test Them for Stock Management Application.

Write Up

Aim:

Develop a stock management application that helps to search the product in the database and show inventory as well

Background of the problem statement:

The E-commerce application shows the list of similar products available in stock. By checking the product details, it will search for that product in the database and displays the number of products available in the store.

Requirements:

You must use the following:

- Eclipse IDE
- Jenkins server
- JFrog artifactory
- Selenium webdriver plugin

Step by Step Process:

Following requirements should be met:

- Some of the source code should be tracked on GitHub repositories. You need to document the tracked files that are ignored during the final push to the GitHub repository.
- The submission of your GitHub repository link is mandatory. In order to track your task, you need to share the link of the repository in the document.

- The step-by-step process involved in completing this task should be documented.
